Find out who the leaders in the region are by holding your mouse over their name

The demands of customers for access to the internet are increasing and in response to this across Eastern Europe, the levels of broadband penetration are increasing. With some countries pulling ahead of the pack, it is worth examining who the frontrunners are.

In this interactive infographic, Telecoms IQ illustrates the countries with the most subscribers, with the highest speeds and the best per capita penetration.

Are you striving to keep up with **NGA** advancements?
Are you struggling to effectively develop your current network to meet increasing customer demand? And, are you looking for new strategies which can deliver higher broadband speeds at a competitive price?
